MAT 100 Precalculus

Homework 17

Basic Information

This assignment is due on Gradescope by **1:30 PM on Thursday, November 12**.

Make sure you understand MHC honor code and have carefully read and understood the additional information on the class syllabus. I am happy to discuss any questions or concerns you have!

A component of this class is helping you understand *why* the math you use works the way it does. To that end, make sure you show all your work as you will be graded on the *process* you use, not just your final answer. And if a question asks you to explain *why* something is true, be sure to answer that part of the question in complete sentences.

Homework will be graded for correctness, and I will point out where mistakes or errors are made. Each homework will be graded *Excellent*, *Satisfactory*, or *Unsatisfactory*. The course rubric explains more about the distinctions of these categories.

Turn-In Problems

4.1: 10, 34
4.3: 4, 6, 12, 16, 26, 28, 30, 66

Do NOT use Desmos or any other graphing program for the next problem. Solve it algebraically.

#11 Find all the asymptotes for $f(x) = \dfrac{x^5 + 3x^3 - 2}{x(x+1)(x-3)(x+2)}$.

Additional Problems (to do on your own, not to turn in)

4.1: 9, 33
4.3: 3, 5, 11, 15, 25, 27, 29, 65
